

Exercise 2.2

The example shown here is quite simple. It assumes that the customer logs in (via a separate use case). This would enable the system to identify the user. Once they have done so, their policy can be displayed. However in this case there is also an alternate flow, which is if the customer has multiple policies. In this case, the system displays a list of policies, and the user selects one to be displayed in detail.

USE CASE DESCRIPTION

Use Case Name : View Policy Details

Actors: Policy holder

Start page: View Policies Page

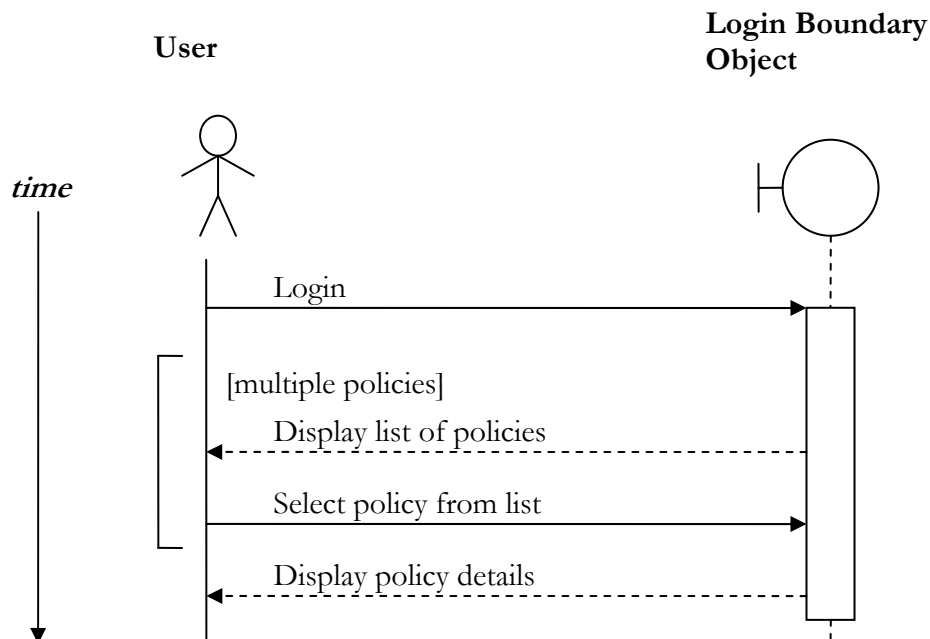

Use Case Description:

1. The actor logs into the system (see customer login use case)
2. The system displays the policy details.

Alternate flow – multiple policies held

- 1.(a) The system displays a list of policies
- 1 (b). The actor selects a policy to view in detail
